The sinking of the Titanic is one of the most infamous shipwrecks in history. This project aims to create a model that predicts which passengers survived the disaster.

- Useful features are Pclass, Name, Sex, Age, SibSp, Parch, Ticket, Fare, Cabin, Embarked
- Target feature is Survived

- Overview
- Introduction
- Exploratory Data Analysis(EDA)**
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning

How many Survived?

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

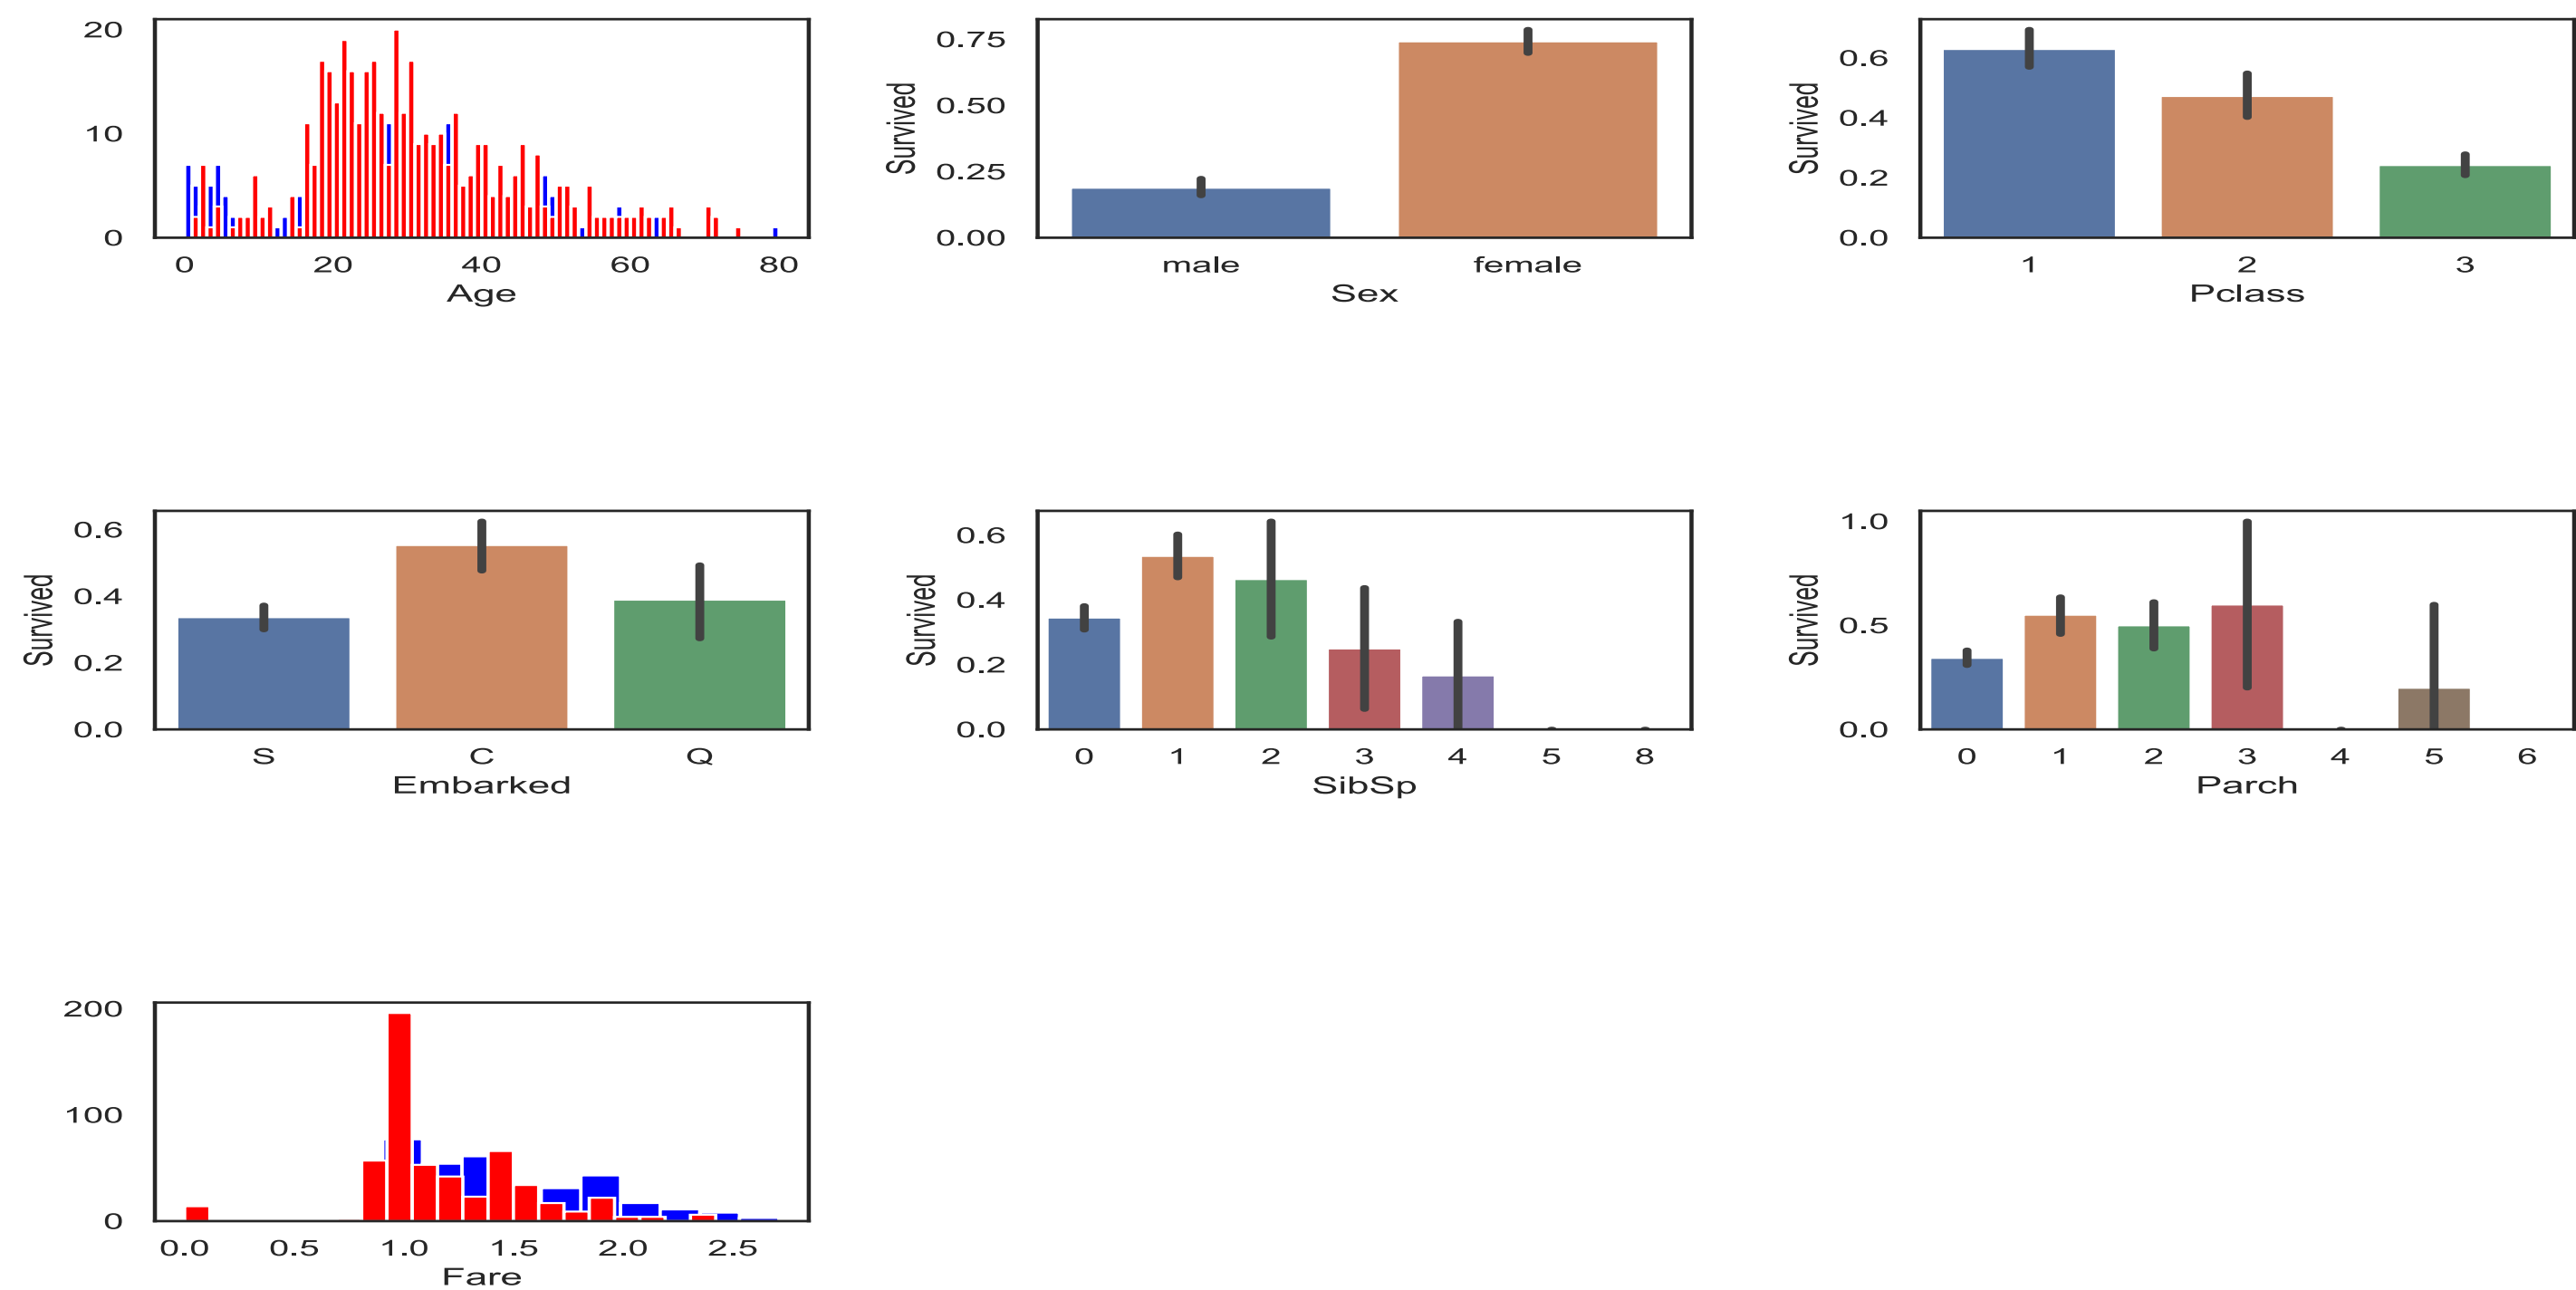

- We will try to check the survival rate by using the different features of the dataset. Some of the features being Sex, Port Of Embarcation, Age,etc.

Analysis of the Features

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

- Categorical Features in the dataset - Sex, Embarked
- Ordinal Features in the dataset - Pclass
- Continuous Features in the dataset - Age

Sex - Categorical Feature

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

Table 1: Survived vs. Sex

Sex	Survived	Numbers
Female	0	81
	1	233
Male	0	468
	1	109

- Survival rates for a women: 75 percent and men: 18-19 percent.

Pclass - Ordianal Feature

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

Table 2: Numbers of Passengers by Pclass

Survived	0	1	All
Pclass			
1	80	136	216
2	97	87	184
3	372	119	491
All	549	342	891

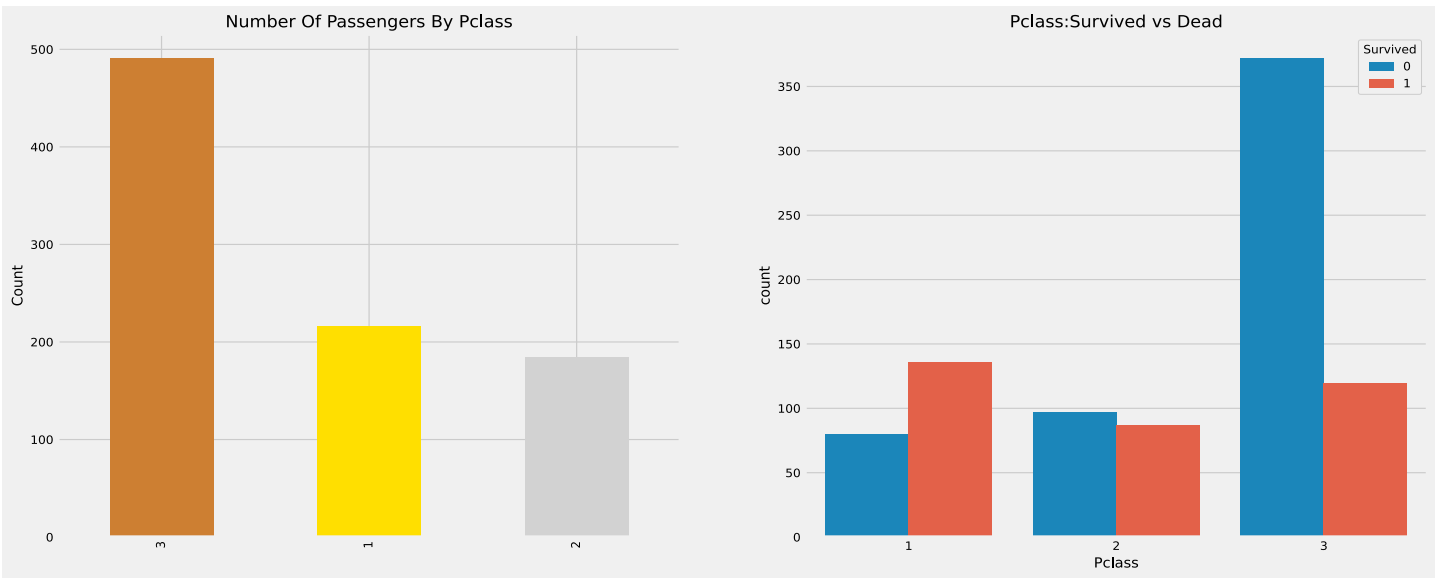

Figure 1: Pclass:Survived vs Dead

Survival rate with Sex and Pclass Together

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

Table 3: Survival rate with Sex and Pclass Together

Sex	Pclass	Survived	2	3	All
Female	0	3	6	72	81
	1	91	70	72	233
Male	0	77	91	300	468
	1	45	17	47	109
All		216	184	491	891

Figure 2: Survival rate with Sex and Pclass Together

Age - Continuous Feature

Overview
Introduction
Exploratory Data Analysis(EDA)
Dataset
How many Survived?
Analysis of the Features
Feature Engineering and Data Cleaning
Predictive Modeling
Conclusion

Oldest Passenger was of: 80.0 Years
Youngest Passenger was of: 0.42 Years

Figure 3: Survival rate with Age

Observations:

- 1)The Toddlers(age<5) were saved in large numbers.
- 2)The oldest Passenger was saved(80 years).
- 3)Maximum number of deaths were in the age group of 30-40.

Embarked - Categorical Value

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

- 1)Maximum passenegers boarded from S. Majority of them being from Pclass3.
- 2)The Passengers from C survived.
- 3)The Embark S looks to the port from where majority of the rich people boarded. Still the chances for survival is low here.
- 4)Port Q had almost 95 percent of the passengers were from Pclass3.

Figure 4: Survival rate with Port of Embarkation

Correlatoin Matrix

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Dataset
- How many Survived?
- Analysis of the Features
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

The highest correlation is between SibSp and Parch i.e 0.41.

Figure 5: Interpreting the heatmap

- Correlation Matrix after Data Cleaning
- Predictive Modeling
- Conclusion

Feature Engineering and Data Cleaning

Converting features into suitable form for modeling

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Feature Engineering and Data Cleaning
- Removing Redundant features
- Correlation Matrix after Data Cleaning
- Predictive Modeling
- Conclusion

- Age: Age_band
- Family_size and Alone: Summation of Parch and SibSp
- Fare: Fare_cat

Table 4: Age_Band

Age_band	Numbers
1	382
2	325
0	104
3	69
4	11

Figure 6: Age_Band

Removing Redundant features

Overview
Introduction
Exploratory Data Analysis(EDA)
Feature Engineering and Data Cleaning
Removing Redundant features
Correlation Matrix after Data Cleaning
Predictive Modeling
Conclusion

- Name→ We don't need name feature as it cannot be converted into any categorical value.
- Ticket→ It is any random string that cannot be categorised.
- Fare→ We have the Fare_cat feature, so unneeded
- Cabin→ A lot of NaN values and also many passengers have multiple cabins. So this is a useless feature.
- Fare_Range→ We have the fare_cat feature.
- PassengerId→ Cannot be categorised.

Correlation Matrix after Data Cleaning

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Feature Engineering and Data Cleaning
- Removing Redundant features
- Correlation Matrix after Data Cleaning
- Predictive Modeling
- Conclusion

Positive correlation: SibSp and Family_Size and Parch and Family_Size and Negative correlation: Alone and Family_Size

Figure 7: Correlation Matrix after Data Cleaning

Prediction Accuracy

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Prediction Accuracy
- Conclusion

- Split the train sample into train and test dataset
- Train Data_size : 0.7 and Test Data_size : 0.3
- Total sample size = 891; training sample size = 623, testing sample size = 268

Table 5: Accuracy Comparison of different Classifier Algorithms

	Acuracy
Radial Support Vector Machines(rbf-SVM)	0.835820895522388
Linear Support Vector Machine(linear-SVM)	0.8171641791044776
Logistic Regression	0.8134328358208955
Decision Tree	0.8059701492537313
K-Nearest Neighbours(KNN)	0.832089552238806
Gaussian Naive Bayes	0.8134328358208955
Random Forests	0.8208955223880597

Conclusion

Conclusion

- Overview
- Introduction
- Exploratory Data Analysis(EDA)
- Feature Engineering and Data Cleaning
- Predictive Modeling
- Conclusion

- Basic modeling of the data
- To overcome the model variance, and get a generalized model,we can use Cross Validation
- Results can be further enhanced
